Lab Exercise for Week 4

Put the `Date-Person-Lop` classes in a package called `People` and the `Boss-Worker` code into a package called `Office`. Use the safe components style of restricted methods for any communication between `Boss` and `Worker` objects.

Make the `Person` class keep its own personal copy of name and date of birth, rather than just storing a pointer to an external object. (Use `clone`). Explain why `Lop` should not keep its own personal copy of the `Person` objects stored inside it.

Demonstrate your solution by the lab on Monday 17th February.
